To the National Highway Traffic Safety Administration, Department of Transportation  
Docket number: 2005-22223 - 1756

U.S. DEPARTMENT OF TRANSPORTATION  
DOCKET

2005-07-20 11:27

I urge you to reduce oil consumption by increasing gas mileage standards for cars and light trucks to 40 miles per gallon, which would reduce oil consumption, save billions at the pump, and reduce global warming.

The most important action we can take to protect our environment and defend ourselves from future prices spikes is to use less gasoline in our cars and trucks. The current light truck proposal only harms consumers and the environment because it is such a paltry increase to miles per gallon standards, it allows for new loopholes so that manufactures can sidestep overall increases, and it counteracts state initiatives to clean up cars.

I also urge you to preserve states' rights to regulate vehicle emissions by removing language from your proposal that says federal law preempts states from doing more to increase gas mileage.

I understand my comments will be posted on a public website.

Sincerely,

Stacey Barber  
4115 SE 42nd Ave  
Portland, OR 972063212

Please, raise the standard. It is so vital for the environment, our own well being and our children's. It is important to me as a citizen to make car companies improve their gas mileage to help consumers afford to pay the high petrol prices. Also, please invest and promote other resources such as ethanol. These changes are so critical to the future of our world.
